

Spring Moss Mix

- **3-4 ounces of SuperTrace per pound of ferrous sulfate added to your tank mix will maximize moss control, minimize staining, and slow oxidation (orange color in your tank).**
- **Fully chelated SuperTrace holds metals like iron in soluble form. Iron solutions can turn orange, or oxidize, within a few hours without chelation, diminishing the effectiveness as a moss killer and hindering uptake by the grass plants.**
- **SuperTrace contains a host of micro-nutrients and fulvic acid that will benefit turf, so you'll be providing much more than good moss control.**
- **Add SuperTrace last in your moss mix and if you have to leave it overnight or over a weekend, it won't change color and lose effectiveness. Try it and see!**
